DETAILED ACTION

Response to Amendment

1. Applicants' amendments, filed on 08/29/2006, with respect to Claims 2-6 and 32-33 have been fully considered and are persuasive. The 35U.S.C. 102 rejections have been withdrawn. None of the previously cited reference teaches the Claims 2-6 and 32-33.

Claims 1 and 7-31 had been canceled.

Allowable Subject Matter

2. Claims 2-6 and 32-33 are allowed.

Examiner's Statement of Reasons for Allowance

3. The following is a statement of reasons for the indication of allowable subject matter: The prior art along or in combination fails to teach or make obvious the following limitations:

"a data switching matrix having a plurality of ingress ports and a plurality of egress ports, wherein for each of the ingress ports, the data switching matrix is configured to transport data from each the ingress port to one of the plurality of egress ports; a plurality of ingress edge units, each of which is coupled to one of the plurality of ingress ports of the data switching matrix, wherein each of the plurality of ingress edge units is configured to receive a data from a

corresponding one or more of a plurality of ingress lines; a plurality of egress edge units, each of which is coupled to one of the plurality of egress ports of the data switching matrix, wherein each of the plurality of egress edge units is configured to transmit data received from the data switching matrix to one or more of a plurality of egress lines; wherein each of the plurality of ingress edge units is configured to examine data received via the corresponding ingress lines and to identify portions of the data corresponding to each of the egress edge units, wherein portions of the data corresponding to each of the egress edge units is stored in a corresponding buffer, and wherein data in each buffer is transmitted to the corresponding egress edge unit via the data switching matrix in a predetermined time slot, wherein the ingress edge unit comprises: one or more ingress ports, each of which is configured to be coupled to an ingress data line; a switch coupled to the one or more ingress ports; and a plurality of buffers coupled to the switch; wherein the switch is configured to store data received via the one or more ingress ports in the plurality of buffers, wherein the data stored in each of the plurality of buffers is destined for a corresponding one of a plurality of destinations; and wherein the ingress edge unit is configured to: transmit data from each of the plurality of buffers in a corresponding predetermined time slot, and schedule data from each of the plurality of buffers to be delivered to the corresponding one of the plurality of destinations, independent of the predetermined time slot" as recited in the independent claim 2.
